1 Introduction

This project aims to improve the customer onboarding process by replacing manual verification with an automated digital workflow using OTP and KYC APIs. The current process is slow and inefficient, leading to customer dissatisfaction and drop-offs.

2 Problem/Impact/Successful Outcome

The Problem	The Impact	The Successful Outcome
- Manual onboarding takes 2–3 days - No real-time tracking - High user drop-off	- Loss of potential customers - Increased operational workload - Poor user experience	- Onboarding completed within 10 minutes - Automated KYC verification - Real-time status updates

3 Objectives

ID	Business Objective	Business Owner	Business Importance
O1	Reduce onboarding time	Business	High
O2	Improve user completion rate	Product	High
O3	Automate KYC process	Compliance	High

4 Purpose Of Document

This document defines the business requirements for the customer onboarding system. It ensures alignment between stakeholders and provides a clear understanding of what the system should achieve.

5 Scope

In Scope	Out Of Scope
- User registration - OTP verification - Document upload - KYC API validation - Status tracking	- CRM integration - Advanced analytics

6 Definitions, Acronyms and Abbreviations

Abbreviation/Acronym	Description
KYC	Know Your Customer
API	External system communication
OTP	One Time Password

7 Risks

Ref	Risk
R1	API Failure or delay
R2	Data Privacy concerns

8 Assumptions

Ref	Assumption
A1	Users have valid documents
A2	Internet connectivity available

9 Issues

Ref	Issue
I1	Dependency on third – party APIs

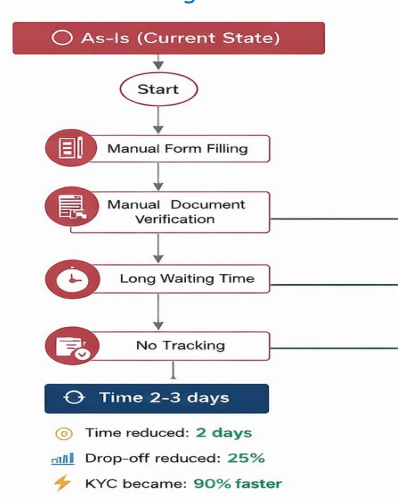

10 Dependencies

Ref	Dependency
D1	KYC API provider
D2	OTP service

11 As Is Process

Current onboarding process:

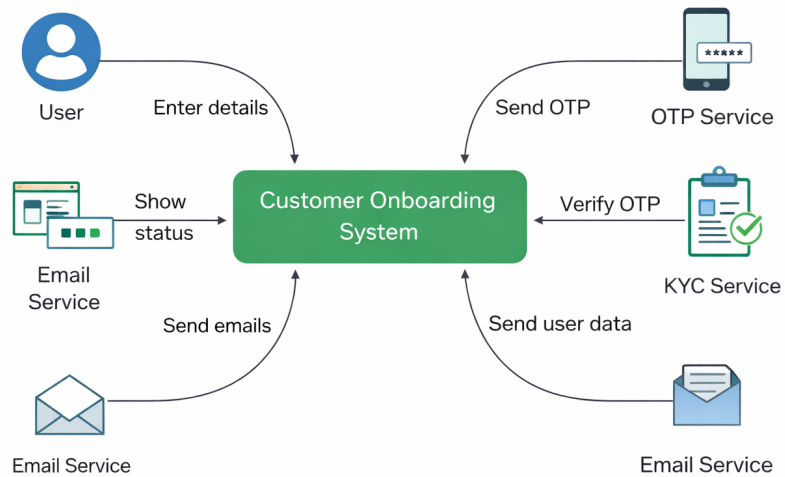

- User fills form manually
- Documents verified manually
- Approval takes 2–3 days
- No tracking available

12 Context Diagram

The context diagram shows how the onboarding system interacts with users and external services like OTP and KYC APIs at a high level.

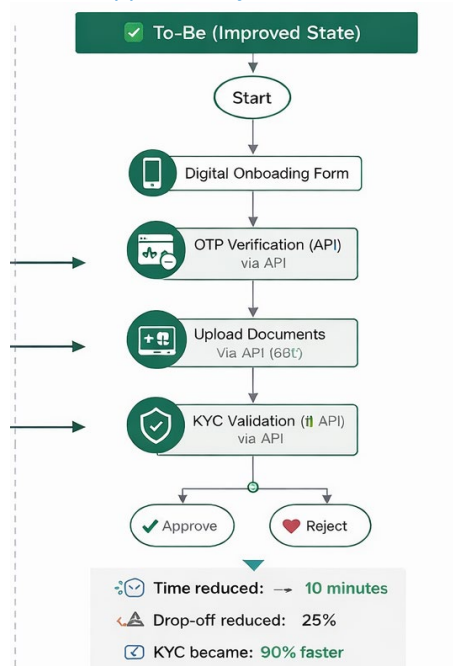

Customer Onboarding System – Context Diagram

13 Process Overview Diagram

Future onboarding process:

- User enters details
- OTP verification
- Document upload
- KYC validation
- Instant approval/rejection

14 High Level To Be Business Requirements

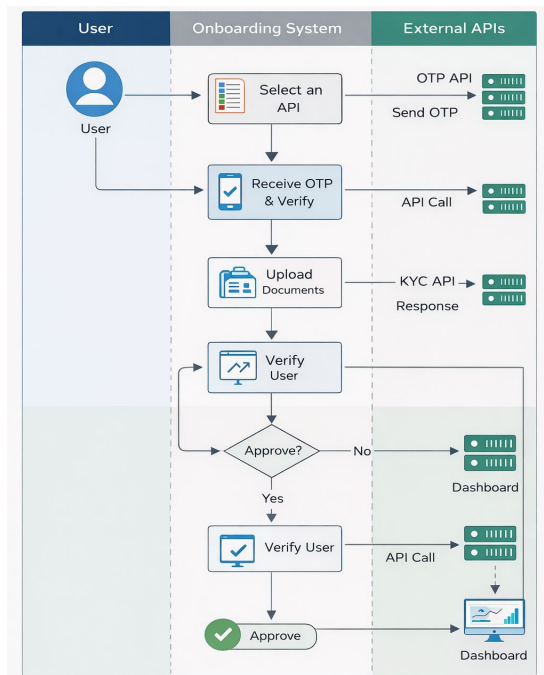

- *Digital onboarding system*
- *Real-time verification*
- *API integration*
- *Automated decision-making*

15 Detailed Business/IT Requirements

15.1 Functional Requirements

ID	Title	Requirements Description	Type (*)	MoSCoW Priority
FR1	User Registration	Register using mobile number	Business	Must
FR2	OTP Verification	Validate user via OTP	Integration	Must
FR3	Document Upload	Upload KYC documents	Application	Must
FR4	KYC Validation	Verify via API	Integration	Must
FR5	Status Dashboard	Show onboarding status	Application	Should

15.2 Process Diagram

15.3 Non Functional Requirements

ID	Title	Requirements Description	Type (*)	MoSCoW Priority
NFR1	Performance	System should respond within 2 seconds for all user actions	Performance	Must
NFR2	Security	System should respond within 2 seconds for all user actions	Security	Must
NFR3	Availability	System should be available 99.9% of the time	Availability	Must
NFR4	Reliability	System should handle failures gracefully and recover quickly	Reliability	Should

NFR5	Scalability	System should support increasing number of users without performance drop	Capacity	Could
NFR6	Usability	Interface should be simple and easy to use for all users	Usability	Should
NFR7	Compatibility	System should work across mobile and web platforms	Compatibility	Should
NFR8	Audit & Logging	System should maintain logs of user actions and API calls	Audit	Could

16 Business Impact Assessment

- **Process**
Manual → Automated
- **People**
Reduced manual workload
- **Customer**
Faster onboarding
Better experience
- **Financial**
Reduced operational cost

17 Costs

- *API integration cost*
- *Development effort*
- *Maintenance cost*

18 Appendices

- *Diagrams*
- *Wireframes*
- *User Stories*
